Product features		
Application	For On/Off and floating point control of dampers in HVAC systems. Actuator sizing should be done in accordance with the damper manufacturer's specifications.	
		y to a damper shaft from 1/4" up to 5/8" in diameter by means o afts up to 3/4" diameter can be accommodated by an accessory
Operation		th and does not require any limit switches, but is electronically anti-rotation strap supplied with the actuator will prevent
	When reaching the damper or a	rotation and a visual indicator indicates position of the actuator. actuator end position, the actuator automatically stops. The ged with a button on the actuator cover.
	Application Specific Integrated ( rotation and provides a digital r	a sensorless brushless DC motor, which is controlled by an Circuit (ASIC). The ASIC monitors and controls the actuator's rotation sensing (DRS) function to prevent damage to the wer consumption is reduced in holding mode.
	Add-on auxiliary switches or fee actuator body for signaling and	edback potentiometers are easily fastened directly onto the switching functions.
Typical specification	Proportional control damper actuators shall be electronic direct-coupled type, which require no crank arm and linkage and be capable of direct mounting to a shaft from 1/4" to 5/8" diameter. Actuators must provide contorl in response to a control input from an electronic controller or positioner. Actuators shall have brushless DC motor technology and be protected from overload at all angles of rotation. Actuators shall have reversing switch and manual override on the cover. Run time shall be constant and independent of torque. Actuators shall be cULus listed, have a 5-year warranty, and be manufactured under ISO 9001 International Quality Control Standards. Actuators shall be as manufactured by Belimo.
