

Energy metering pressure independent control valve that optimizes, documents and proves water coil performance in chilled and hot water systems.

- Nominal voltage AC/DC 24 V
- Control Modulating, Communicative, Hybrid, Cloud
- Measures Energy
- Controls Power
- Manages Delta T

Picture may differ from product

5-year warranty

Type Overview

Type	DN	V'nom [GPM]	Body Pressure Rating
EV125+NRX-E	1 1/4" [32]	28.5	360 psi

Structure

Components The Belimo Energy Valve consists of a characterized control valve, an actuator and a thermal energy meter with a logic and a sensor module.

The logic module provides the power supply, the communication interface and the NFC connection of the energy meter. All relevant data are measured and recorded in the sensor module.

This modular design of the energy meter means that the logic module can remain in the system if the sensor module is replaced.

- External temperature sensor T1
- Integrated temperature sensor T2
- Logic module 1
- Sensor module 2
- Characterized control valve with actuator 3

Technical data

Electrical data	Nominal voltage	AC/DC 24 V
	Nominal voltage frequency	50/60 Hz
	Nominal voltage range	AC 19.2...28.8 V / DC 21.6...28.8 V
	Power consumption in operation	5 W
	Transformer sizing	8 VA

Technical data

Electrical data	Connection Ethernet	RJ45 socket
	Power over Ethernet PoE	DC 37...57 V 11 W (PD13W)
	Conductors, cables	Power supply AC/DC 24 V: cable length <100 m, no shielding or twisting required Power supply PoE: shielded cables recommended
	Electrical Connection	18 AWG plenum cable and RJ45 socket (Ethernet)
	Overload Protection	electronic throughout 0...90° rotation
Data bus communication	Communicative control	BACnet/IP, BACnet MS/TP Modbus TCP, Modbus RTU MP-Bus Cloud
Functional data	Valve size [mm]	1.25" [32]
	Operating range Y	2...10 V
	Operating range Y note	4...20 mA w/ ZG-R01 (500 Ω, 1/4 W resistor)
	Input impedance	100 kΩ (0.1 mA), 500 Ω
	Operating modes optional	VDC variable
	Position feedback U	2...10 V
	Position feedback U variable	VDC variable
	Running Time (Motor)	90 s
	Control accuracy	±5%
	Min. controllable flow	1% of V'nom
	Fluid	chilled or hot water, up to 60% glycol max (open loop/steam not allowed)
	Fluid temperature	14...250°F [-10...120°C]
	Close-off pressure	Δps 200 psi
	Differential pressure	Δp 5...50 psi 1...50 psi, see "Flow Reduction Chart"
	Flow characteristic	equal percentage or linear
	Pipe connection	Internal thread NPT (female)
	Servicing	maintenance-free
	Manual override	external push button
	Inlet Length to Meet Specified Measurement Accuracy	0x nominal pipe size (NPS)
Measuring data	Measured values	Flow Temperature
	Temperature sensor	Pt1000 - EN 60751, 2-wire technology, inseparably connected Cable length external sensor T1: 3 m [9.8 ft]
Temperature measurement	Measuring accuracy absolute temperature	Temperature probe (probe only – individually compensated): ±(0.1 + 0.0017 T)°C (corresponds to Pt1000 EN60751 Class AA) Calculator + temperature probe: ±(0.15 + 0.002 T)°C
	Measuring accuracy differential temperature	±0.17K @ ΔT = 5K ±0.18 K @ ΔT = 10 K ±0.23 K @ ΔT = 20 K
Flow measurement	Measuring accuracy flow	±2% @ 20°C [68°F]
	Measurement repeatability	±0.5% (Flow)

Technical data

Flow measurement	Sensor technology	Ultrasonic with glycol and temperature compensation
Safety data	Power source UL	Class 2 Supply
	Degree of protection IEC/EN	IP54 when using protective cap or protective grommet for RJ45 socket. Sensor module: IP65
	Degree of protection NEMA/UL	NEMA 2
	Housing	UL Enclosure Type 1
	Agency Listing	cULus acc. to UL60730-1A/-2-14, CAN/CSA E60730-1:02 CE acc. to 2014/30/EU and 2014/35/EU
	Quality Standard	ISO 9001
	UL 2043 Compliant	Suitable for use in air plenums per Section 300.22(C) of the NEC and Section 602 of the IMC
	Ambient humidity	Max. 95% RH, non-condensing
	Ambient temperature	-22...122°F [-30...50°C]
	Storage temperature	-40...176°F [-40...80°C]
Materials	Valve body	Nickel-plated brass body
	Flow measuring pipe	Nickel-plated brass body
	Stem	stainless steel
	Stem seal	EPDM (lubricated)
	Seat	PTFE
	Characterized disc	TEFZEL®
	O-ring	EPDM
	Ball	stainless steel

Safety notes

- This device has been designed for use in stationary heating, ventilation and air-conditioning systems and must not be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- Outdoor application: Only possible if no (sea) water, snow, ice, sunlight, or aggressive gases directly act on the device, and if it is ensured that the ambient conditions remain within the limit values specified in the data sheet at all times.
- Only authorized specialists may carry out installation. All applicable legal or institutional installation regulations must be complied with during installation.
- The device contains electrical and electronic components and must not be disposed of as household refuse. All locally valid regulations and requirements must be observed.

Product features

Application	Water-side control certified for heating applications only. For AHUs and water coils.
Operation	The Belimo Energy Valve™ is a pressure-independent control valve with integrated energy metering that measures, documents, and optimizes water coil performance.
Operating mode	The HVAC performance device is comprised of four components: characterized control valve (CCV), measuring pipe with flow sensor, temperature sensors and the actuator itself. The adjusted maximum flow (V'max) is assigned to the maximum control signal DDC (typically 10 V / 100%). Alternatively, the control signal DDC can be assigned to the valve opening angle or to the power required on the heat exchanger (see power control). The HVAC performance device can be controlled via communicative or analog signals. The fluid is detected by the sensor in the measuring pipe and is applied as the flow value. The measured value is balanced with the setpoint. The actuator corrects the deviation by changing the valve position. The angle of rotation α varies according to the differential pressure through the control element (see flow curves).

Product features

- PoE (Power over Ethernet)** If necessary, the thermal energy meter can be supplied with power via the Ethernet cable. This function can be enabled via the Belimo Assistant App.
- DC 24 V (max. 8 W) is available at wires 1 and 2 for power supply of external devices (e.g. actuator or active sensor).
- Caution: PoE may only be enabled if an external device is connected to wires 1 and 2 or if wires 1 and 2 are insulated!

Accessories

Replacement sensor modules	Description	Type
	T-piece with thermowell DN 15	A-22PE-A09
	T-piece with thermowell DN 20	A-22PE-A10
	T-piece with thermowell DN 25	A-22PE-A11
	T-piece with thermowell DN 32	A-22PE-A12
	T-piece with thermowell DN 40	A-22PE-A13
	T-piece with thermowell DN 50	A-22PE-A14
Tools	Description	Type
	Belimo Assistant Link Bluetooth and USB to NFC and MP-Bus converter for configurable and communicative devices	LINK.10
Mechanical accessories	Description	Type
	Thermowell (fabricated) Stainless steel, 3.2" [80 mm], 1/2" NPT, SW=0.94"	A-22PE-A16
Sensors	Description	Type
	Liquid differential pressure sensor, 0...1 bar, 0...15 psi, 1/4" NPT	22WDP-511
	Liquid differential pressure sensor, 0...2.1 bar, 0...30 psi, 1/4" NPT	22WDP-512
	Liquid differential pressure sensor, 0...3.4 bar, 0...50 psi, 1/4" NPT	22WDP-514
	Liquid differential pressure sensor, 0...6.9 bar, 0...100 psi, 1/4" NPT	22WDP-515

Electrical installation

Supply from isolating transformer.

Parallel connection of other actuators possible. Observe the performance data.

The wiring of the line for BACnet MS/TP / Modbus RTU is to be carried out in accordance with applicable RS485 regulations.

Modbus / BACnet: Supply and communication are not a galvanic dry contact. COM and the ground of the devices must be connected.

Sensor connection: An additional sensor can optionally be connected to the thermal energy meter. This can be a passive resistance sensor Pt1000, Ni1000, NTC10k (10k2), an active sensor with output DC 0...10 V or a switching contact. Thus the analogue signal of the sensor can be easily digitised with the thermal energy meter and transferred to the corresponding bus system.

Analog output: An analog output is available on the thermal energy meter. This can be selected as DC 0...10 V, DC 0.5...10 V or DC 2...10 V. For example, the flow rate or the temperature of the temperature sensor T1 / T2 can be output as an analog value.

Wire colors:

- 1 = black
- 2 = red
- 3 = white
- 5 = orange
- 6 = pink
- 7 = grey

Functions:

- 1 = Com
- 2 = AC/DC 24 V
- 3 = Sensor (optional)
- 5 = 0...10 V, MP-Bus
- C1 = D- (wire 6)
- C2 = D+ (wire 7)

Electrical installation

AC/DC 24 V, output signal

BACnet MS/TP / Modbus RTU

BACnet/IP / Modbus TCP

MP-Bus, supply via 3-wire connection

PoE with BACnet/IP / Modbus TCP

Connection of a notebook for parameterisation manual control via RJ45.
Optional connection via RJ45 (direct connection to notebook / connection via Intranet or Internet) for access to the integrated web server

Electrical installation

Converter for sensors

Connection with passive sensor

Connection with switching contact

Connection with active sensor

Further electrical installations

Functions with specific parameters (configuration necessary)

Override control and limiting with AC 24 V with relay contacts (with conventional control or hybrid mode, not for differential pressure control)

—K—
e.g. 1N 4007

					Q' _{min} ³⁾	Q' _{max} ³⁾
					Y	Y
					Open ¹⁾	Open ¹⁾
					V' _{max} ²⁾	V' _{max} ²⁾
					Q' _{max} ³⁾	Q' _{max} ³⁾

- 1) Position control
- 2) Flow control
- 3) Power control
- Inv. = control signal inverted

MP-Bus, supply via 3-wire connection

MP-Bus via 2-wire connection, local power supply

M-Bus with converter

M-Bus with converter in parallel mode with PoE with BACnet/IP / Modbus TCP

M-Bus with converter in parallel mode with BACnet/IP / Modbus TCP

Further electrical installations

Differential pressure control operating mode

Connection of differential pressure sensor 22WDP... (sensor not included)

Operating controls and indicators

1 LED display green

On:	Device starting up
Flashing:	In operation (Power ok)
Off:	No power

2 Flow direction

3 NFC interface

4 Manual override button

Press button:	Gear train disengages, motor stops, manual override possible
Release button:	Gear train engages, standard mode. Device performs synchronisation

Installation notes

Permissible installation orientation The ball valve can be installed upright to horizontal. The ball valve may not be installed in a hanging position, i.e. with the stem pointing downwards.

Installation location in return Installation in the return is recommended.

Water quality requirements The water quality requirements specified in VDI 2035 must be adhered to. Belimo valves are regulating devices. For the valves to function correctly in the long term, they must be kept free from particle debris (e.g. welding beads during installation work). The installation of a suitable strainer is recommended.

Servicing Ball valves, rotary actuators and sensors are maintenance-free. Before any service work on the control element is carried out, it is essential to isolate the rotary actuator from the power supply (by unplugging the electrical cable if necessary). Any pumps in the part of the piping system concerned must also be switched off and the appropriate slide valves closed (allow all components to cool down first if necessary and always reduce the system pressure to ambient pressure level). The system must not be returned to service until the ball valve and the rotary actuator have been correctly reassembled in accordance with the instructions and the pipeline has been refilled by professionally trained personnel.

Flow direction The direction of flow, specified by an arrow on the housing, is to be complied with, since otherwise the flow rate will be measured incorrectly.

Cleaning of pipes Before installing the thermal energy meter, the circuit must be thoroughly rinsed to remove impurities.

Prevention of stresses The energy meter must not be subjected to excessive stress caused by pipes or fittings.

Inlet section There are no requirements for straight inlet sections prior to the flow sensor. Product has been tested to and fulfills the requirements of EN1434-4:2022
